sfsguide. Starships

Starship combat is an integral part of the Starfinder Roleplaying Game and characters should expect to participate in it from time to time. As explained earlier in this guide, certain scenarios have the Starship tag, indicating that the associated scenario includes one or more starship combat encounters. This appendix details all the guidelines and information necessary for players to participate in starship combat encounters, in addition to the rules presented in the Starfinder Core Rulebook.

Starship Combat Overview

The Starfinder RPG contains a robust system for starship creation and customization, which while intuitive for home campaigns, is difficult to manage in an organized play environment. As starships are essentially another character shared between a party, it would be extremely time consuming for a group of players to decide on exactly how to customize a starship prior to a scenario. To facilitate ease of play, the Starfinder Society provides characters with common starship variants, accessible in any scenario involving starship combat.

Starship Choice: Starship choice occurs immediately prior to slotting boons for the scenario. During this period, the PCs can also decide on any Starship boons they wish to utilize (more on this further below). The party should come to an agreement on which starship will best suit their style of play, as well as the best starship for the specific mission. In the event that the party cannot come to a unanimous agreement on which ship to take, scenarios provide a suggested starship from those commonly available, which the GM can declare the party will use.

When choosing a starship, the PCs always receive the version of the ship with a tier equal to the highest level of their subtier. For example, a party selecting a starship for a Subtier 1–2 scenario would receive the tier 2 ship, while a party selecting a starship for a

Subtier 5–6 scenario would receive a tier 6 ship.

Common Starships: The Azata, Drake, and Pegasus models of starship are the most commonly employed ships in the modern Starfinder Society. This guide includes stat blocks of each at tiers 2, 4, 6, 8, 10 and 12. Versions at higher tiers exist, but they are included within a scenario when appropriate. With the exception of the Gorgon, ships presented in this guide are always available to PCs; the Gorgon is accessible only with the [Starship Schematic](#) boon, a Tier 4 Exo-Guardians [faction reward](#).

New Starships: Throughout the course of a character's career, they may come into possession of a new starship to use in the Starfinder Society Roleplaying Guild. Often, these starships will be a reward from an important scenario, gained from a promotional Chronicle sheet, or featured temporarily in an adventure. Unlike the common starships presented in this guide, new starships will have all the rules for using them in starship combat scenarios listed on their respective information sheets.

Azata (Explorer Frame Variant)

The Azata is the first of a new generation of spacecraft designed to modernize the Starfinder Society fleet and support First Seeker Ehu Hadif's renewed focus on exploration and expanding the Society's presence in the Vast. It is designed to support long-range travel, withstand hazardous environments, and be well-equipped for the rigors of deep-space exploration. It features the best scanners and science assets of the common Starfinder ships, though it is the least heavily-armed.

Drake (Transport Frame Variant)

When a problem can be solved through the liberal application of missiles, the Drake stands ready. This workhorse starship proves the Starfinder Society can bring impressive combat presence to a space battle. It sacrifices scanning capabilities and the built-in expansion bays of the Pegasus, making it less enticing to support landing parties or extended

operations; the Azata outpaces both the Drake and the Pegasus in longevity and scanning.

Pegasus (Explorer Frame Variant)

The Pegasus emphasizes speed and provides a suite of supportive options. It is less armed than the Drake but employs improved sensors and a host of ready expansion bays; in turn, its sensors are less advanced than the Azata but it has more firepower. This makes the Pegasus ideal for missions where starship support and combat capabilities are likely to be equally as valuable.

Gorgon (Destroyer Frame Variant)*

The Gorgon represents a new class of starship pressed into service by the Exo-Guardians faction and intended to handle high-level threats. Unlike the Society's other standard starship designs, the Gorgon sacrifices amenities and scientific equipment in exchange for raw firepower. These ships thrive in battle or situations where force of arms is more important than other considerations.

***Selecting this starship requires the [Starship Schematic](#) boon.**

Starship Boon Slot

Following the selection of a starship, a character can select a boon for his Starship boon slot. This boon slot typically includes boons that act as abilities, modifications, or replacements for starships. Each Starship boon indicates the specific rules in applying it, often citing specific starships or tiers to which the boon can be applied. For ease of play, players do not need to concern themselves with the build points, power core units (PCU), or available expansion bays of a shared starship.

Unless otherwise stated, multiple versions of the same Starship boon do not stack.
